PERSONAL INFORMATION

Jorge Crespo Celdrán

- C/Islas Canarias 180, Esc1, Pta17, 46024 Valencia (Spain)
- jorcrece@upv.es

I am an active person with social skills and I particularly enjoy working in a multidisciplinary group environment. I know the importance of good communication and co-ordination, and I am organized and delivery focused. I have always welcomed personal and professional challenges, increase of knowledge and clear objectives.

I am always up to date with the last technology as well as the last management systems such as lean management.

I am ending my studies in Industrial Electronics and Automation by the Polytechnic University of Valencia and also I have studied during this year with the program Erasmus+ in Ireland to end my formation and realize the final Thesis.

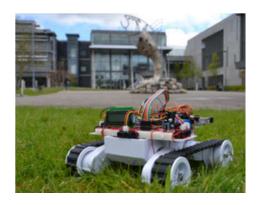

Rover with internet and GPS

Project info

The aim of this project was to develop a **rover** connected to the internet (**Internet of** things) through a mobile internet connection. The entire project (code, hardware, design, etc.) is to be made available as an open source project for others to learn from.

Using the internet and a remote server, commands are sent to the rover from any device from anywhere in the world. The commands that can be sent includes orders to move the vehicle in different directions (i.e. to have full control) and also an order to activate an autonomous mode, which moves the vehicle while avoiding obstacles.

The system is checking continuously if there is an available GPS signal, and if it finds a signal, sends the coordinates (each minute) to a remote server, and from a webpage we can see this coordinates drawn in a map.
